

# MOBILE SECURITY FOR BUSINESS

Smartphones and tablets are used to access business applications, email and customer information, as well as for storing business data. Therefore securing business smartphones is as important as protecting company computers and other devices.

## Complete security for mobile devices

F-Secure Mobile Security for Business is a complete security solution for mobile devices. In the unfortunate event the phone or tablet is lost, stolen, infected by mobile malware or even spied on, Mobile Security for Business helps to safeguard your business confidential data. If the phone is lost or stolen, you need to be sure that your business contacts, emails and confidential documents cannot be misused by anyone. With the help of the remote Locator feature, you always know where your phone is located. The central management enables IT administrators to control devices that are lost or stolen.

## Safe and light mobile experience

F-Secure Mobile Security for Business is extremely easy to install and use. The software is highly automated and works invisibly in the background. Mobile Security for Business retrieves the newest updates automatically whenever any data connection is used. Thanks to its light and efficient scanning technology, F-Secure Mobile Security does not affect the user experience. Browsing Protection identifies which websites are safe to enter and which you should avoid. Harmful sites designed to spread malware or to steal your online identity are automatically blocked to ensure a totally safe web experience.

## Enhanced management

The Mobile Security for Business management portal enables IT administrators to monitor and manage the protection of company mobile devices. The administrator can easily add smartphones and tablets into the management portal, and send a download link and a service activation code as an SMS message directly to the devices. The service status and subscriptions can be monitored with a web browser. Antitheft can be used to lock and reopen lost or stolen phones from the portal. The administrator can even wipe all information from a stolen phone through the portal. Mobile Security is also available in Protection Service for Business, a complete security service solution hosted by F-Secure and managed by local resellers.

Complete security solution for mobile devices with automatic updates

Safeguards your business confidential data

Identifies dangerous websites and protects your identity online

Locates your lost or stolen device, or the person holding it

Protects against viruses and other malware

Administrators can centrally manage company mobile devices

Also available in F-Secure Protection Service for Business, a complete service solution offered by local resellers

## Key Features

### Protects against loss or theft

Mobile devices can easily be lost or stolen, so it's important that you have a way to remotely locate, protect and control the device. With antitheft you can locate the phone (or a person holding it), lock or erase the confidential data remotely, and be informed of who stole the phone via SMS. You can be sure that your company confidential information won't be misused by anyone.

### Safe mobile surfing

Browsing Protection identifies which websites are safe to enter and which you should avoid. Harmful sites are blocked automatically to ensure safe mobile surfing.

### Award-winning protection against all types of malicious software

Real-time protection against viruses, spyware, worms and trojans with a personal firewall that stops hackers from breaking into your smartphone. Mobile Security is based on award-winning F-Secure technologies and was ranked as one of the best products in AV-TEST's Malware Protection for Android test in March 2012.

### Light, efficient and easy

Thanks to light and efficient scanning technology, Mobile Security for Business gives you full protection without affecting the user experience. The smooth user interface is all about making security easy. Frequent automatic updates ensure the fastest protection against mobile threats.

### Central management

Central management makes it easy for an IT administrator or partner to monitor the protection status of all the mobile devices in the service. With the antitheft feature, the administrator can control lost or stolen phones through the portal.

### Available as a service

Mobile Security is available in F-Secure Protection Service for Business, a remotely managed security service for SMBs. Protection Service offers complete protection for PCs, Macs, mobile devices, file servers and e-mail servers and is provided by certified F-Secure resellers.
